

Team USC Dashboard

For visual purposes, all the scatter plots only use 2% of the randomly chosen sample points.

The first column (red) of the dashboard shows that the created Profitability and Sustainability Score corrects some of the uneven distribution issues of the Morningstar Rating.

In the second column, from the first bar chart, we can see that the Morningstar Rating present no information towards the fund's financial performance, while the Profitability and Sustainability Score has a positive correlation with the return. This proves that the created Profitability and Sustainability Score is a more comprehensive rating.

The last column plot the Profitability and Sustainability Score against the Morningstar Portfolio Environment Score and Portfolio Social Score. The clear positive trends in both graphs indicate that the Profitability and Sustainability Score captures the environmental and social impact of the fund.
